How to work with code samples

1. Unzip the file provided for this unit

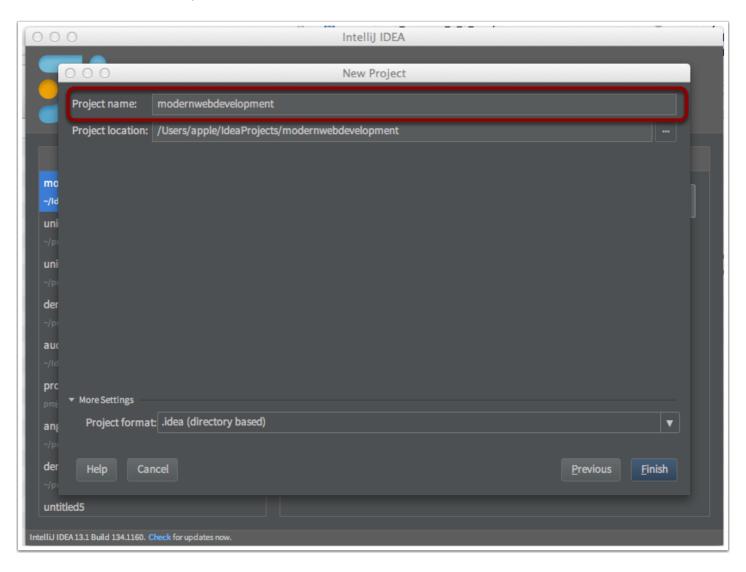

2. Create new empty IntelliJ IDEA project

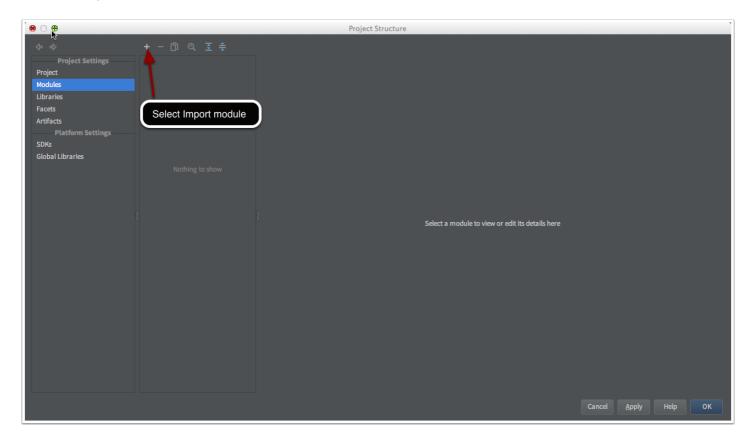

3. New Project

Call it modernwebdevelopment

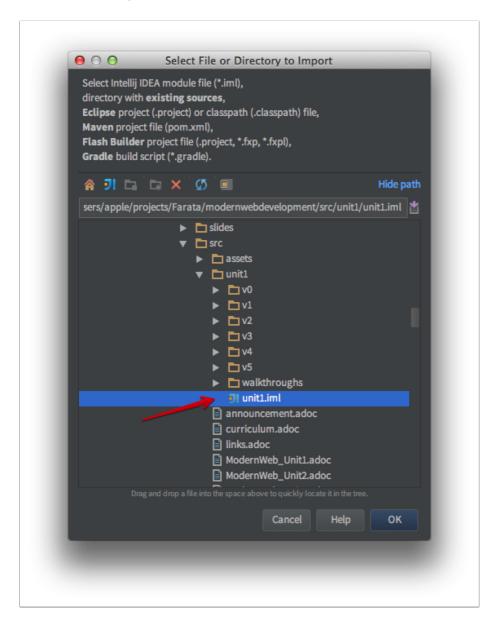

4. Project Structure

Select «Import module»

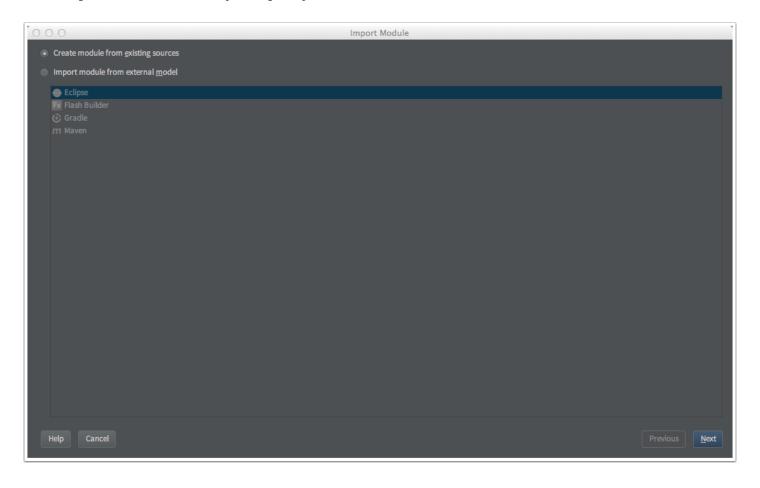

5. Select File or Directory to Import

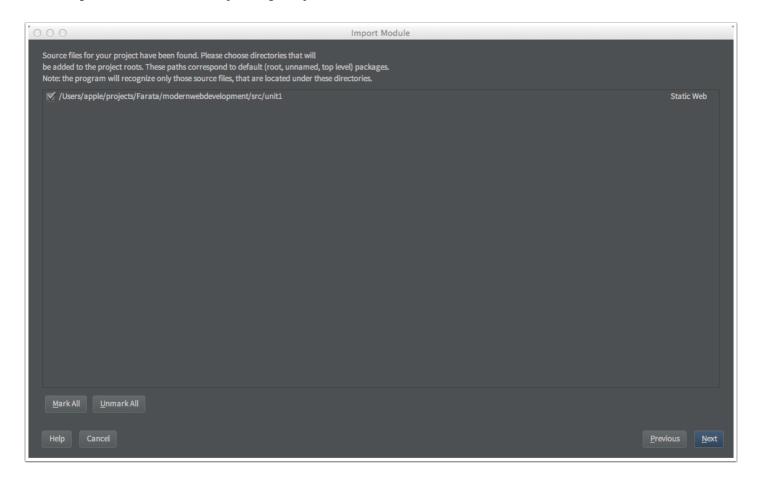

Locate the unziped folder unit1 and select the file unit1.iml

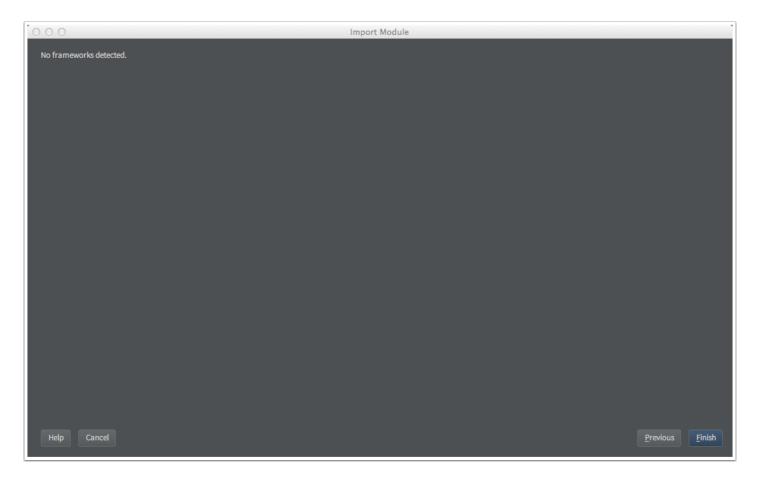

6. Import Module (Step 1)

7. Import Module (Step 2)

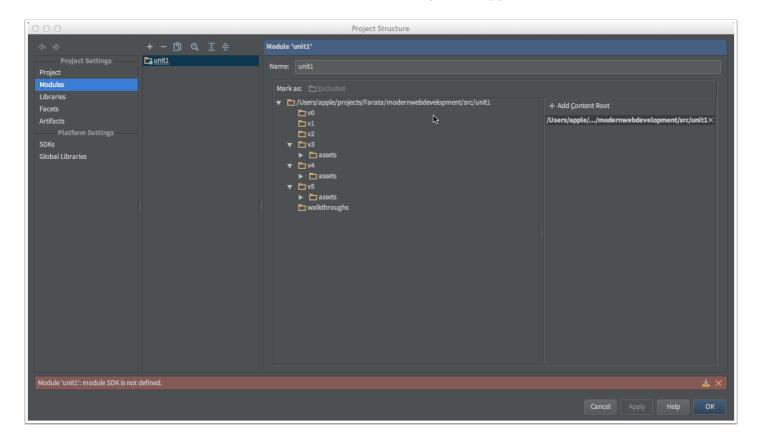

8. Import Module (Step 3)

9. The imported Project Structure

The source code files remain at the same location where you unzipped the archive.

10. The final project strucuture

This how project strucutre should look like

```
v5/index - [unit1] - modernwebdev - [~/IdeaProjects/modernwebdev] - IntelliJ IDEA (Cardea) IU-134.1160
unit1 > to > index.html
 unit1 (

    ▶ □ v0
    ▶ □ v1
    ▶ □ v2

                                    <link rel="stylesheet" href="assets/css/bootstrap.min.css">
   □ v3
                               </head>
                           8
 walkthrough
     <div class="container":
                                       <div class="navbar-header">
                          14
      w2_2.js
                                           <button type="button" class="navbar-toggle" data-toggle="collapse" data-target=".navbar-collapse"</pre>
                                               <span class="icon-bar"></span>
                                               <span class="icon-bar"></span>
                                               <span class="icon-bar"></span>
                          19
                                           <a class="navbar-brand" href="javascript:void(0);">ABC Auction</a>
